Pompano Beach, FL., October 9, 2017 – Brownie's Marine Group, Inc (BWMG) – On October 7, 2017 the Marine Research and Conservation non-profit, Fins Attached, announced the safe arrival of its M/Y Sharkwater, a 134 foot research vessel. Just two weeks prior, LW Americas completed the installation of its first high pressure compressors on the ship.

The M/Y Sharkwater is currently in Panama as the crew prepare to embark toward the Galápagos Islands, where the ship will support a film crew in its efforts to document marine life, with a particular focus on sharks. Aboard the research expedition vessel, is LW America's very first sale and installation of two units from its elite line of high pressure compressors. In order to meet the demanding capacity necessary to conduct the wide span of research, LW Americas installed two LW 320 MC models which support the NitroxMaker NM-10 CS, all controlled from a Yacht Pro 4×4 Panel. This premiere installation will support underwater research conducted from the ship for years to come.

The Sharkwater vessel will host and support various teams within the marine industry including – Scientists, non-governmental organizations (NGOs), marine science students, and documentary crews. All of which will align with the mission of Fins Attached, "To conduct research, promote conservation, and provide education for the protection of the marine ecosystem."

LW Americas looks forward to supporting efforts of advocacy, advancement, conservation, sustainability, safety and so forth in an array of industries – from Public Safety to Biogas.

LW Americas is actively seeking distributors, resellers, and technicians in all regions to join their team. Contact LW Americas at info@lwamericas.com for additional information. For more information visit:https://LWamericas.com.
